**1.PRODUCT DESCRIPTION-PRECAUTIONARY NOTES**

The DSP is a digital signal processor essential to maximize the acoustic performance of your car audio system. It consists of a 32-bit DSP processor and 24-bit AD and DA converters. It can connect to any factory system, even in vehicles featuring featuring an intergrated audio processor, since, thanks to the De-equalization function, the DSP will send back a linear signal. It features selectable High and low level inputs as well as 3.5MM Aux and digital inputs that feed 8 completely variable output channels. Each output channel has a 31-band equalizer available. it also features a 66-frequency electronic crossover as well as . BUTTERWORTH or LINKWITZ filters with 6-24dB slopes and a digital time delay line. the user can select adjustments. That allow him or her to interact with the DSP through a remote control device called DRC.

**WARNING:** 1-a PC provided with Windows XP, Windows Vista or Windows 7 operating system, 1.5GHz minimum. Processor speed , 1 GB RAM minimum memory and a graphics card with a minimum resolution. Of 1024x600 pixels are required to install the software and setup the DSP.  
 2-Before connecting you DSP, carefully read this manual .Improper connections may cause damage to The DSP or to the speakers in the car audio system.
